October 2, 2003

Project No. 01079-02

To: Capistrano Unified School District
32972 Calle Perfecto
San Juan Capistrano, California 92675

Attention: Mr. Bob Sendzik

Subject: Phase I Environmental Site Assessment Update for the planned Oso Grande school site located southeast of Sienna Parkway and O'Neill Drive, Ladera Ranch, California.

Reference: NMG Geotechnical, Inc., 2002, Phase I Environmental Site Assessment for the planned school site located southeast of Sienna Parkway and O'Neill Drive, Ladera Ranch, California; Project No. 01079-02, dated February 4, 2002.

NMG Geotechnical, Inc. (NMG) is pleased to present this Phase I Environmental Site Assessment (ESA) Update report for the subject site. NMG conducted the initial Phase I ESA in January 2002. The following sections present a review of the initial Phase I ESA and the findings, conclusions, and recommendations of a Phase I ESA Update conducted in September 2003.

Site Location and Description

The planned school site, approximately 10 acres in area, is located southeast of Sienna Parkway and O'Neill Drive, in Ladera Ranch, California. The site extends up to 650 feet east of Sienna Parkway, and 670 feet south of O'Neill Drive. At the time of this assessment, the site was comprised of a relatively level vacant lot covered with soil. Aboveground structures, with the exception of a chain-link fence, were not located within the site. A chain link fence bordered each side of the site.

Purpose and Scope

The purpose of this Phase I ESA Update was to assess current site conditions, and evaluate if changes have occurred since the initial Phase I ESA that might contribute to the potential presence of hazardous material contamination at the site. The scope of work included:

- A review of the initial Phase I ESA report;
- A review of current environmental database records;
- A site reconnaissance; and
- Preparation of this report.

Previous Phase I Environmental Site Assessments

NMG prepared the previous Phase I ESA report for the site in January 2002. At the time of that assessment, the site was in a similar state to that observed during the site reconnaissance for this update. The site was noted as being comprised of a vacant, relatively level lot. Soil covered the entire site. Aboveground buildings or other permanent structures were not located within the site. One desilting basin, used for the collection of surface water drainage with a CSP standpipe, was located in the site's southern portion. Indications of other underground structures were not encountered within the site.

The site was noted as being in an undeveloped state and part of a larger cattle ranch (used for dry farming and grazing) between at least 1942 and up to 1999. Mass grading of the site and the adjoining properties began in 1999 and was completed in the summer of 2001. Since this time, the site was noted as being either vacant or used as a temporary storage area for construction materials, such as lumber and utility pipes. No other site uses were known.

NMG's previous assessment revealed no evidence of recognized environmental conditions within the site or adjoining properties. In addition, there were no properties within one mile of the site listed in environmental databases as having the potential to impact the soil and/or groundwater underlying the site with hazardous materials. Based on the findings of the assessment, NMG concluded that further environmental investigations into the release of hazardous materials at the subject site were not considered warranted.

Site Inspection and Observations

On September 30, 2003, a NMG representative visited the site to assess its current utilization, hazardous material storage areas, and to visually search for indications of surface and subsurface contamination. The following sections provide a description of observations made at the site.

- At the time of the site reconnaissance, the site existed as a relatively leveled lot. The site was covered primarily with soil. Sandbags used for drainage control were located within portions of the site. Vegetation was not located within the site.
- Aboveground structures, with the exception of perimeter fencing, were not located within any portion of the site. Chain link fencing bordered the entire site.
- An asphalt-paved access road bordered the site's eastern and southern sides, and a portion of the site's northern side. This road was located outside of the site's fenced portion. Utility manholes, three total, were located along this access road.
- Two relatively new pad-mounted transformers (not in use) were located immediately outside of the fence on the site's western side. Indications of releases from these transformers were not observed at the time of the site reconnaissance.
- Stained soil was not encountered within the site.

- Fill ports and vent pipes to USTs were not observed within or adjacent to the subject site.
- Clarifiers, ponds, pits, and sumps, or other below ground waste disposal areas were not observed onsite.
- Indications of septic systems were not observed on any portion of the site or adjoining areas.
- Groundwater monitoring and/or vadose zone wells were not observed within or adjacent to the subject site.
- Mounds or depressions, suggesting trash or other solid waste disposal at the subject site or surrounding areas, were not observed during this assessment.
- Aboveground storage tanks were not observed within or adjacent to the subject site.
- Pools of liquid or potentially hazardous substances were not observed on any portion of the site during the site reconnaissance.
- Wastewater discharge pipes were not observed on any portion of the site at the time of the site reconnaissance.
- Unusual or noxious odors were not detected during the site reconnaissance.

Project Vicinity

Properties adjoining the site were reviewed for evidence of possible contaminant releases. A brief description of these properties is provided below.

- An asphalt-paved roadway, O'Neill Drive, was located along the site's northern side. A concrete-paved sidewalk was located between this roadway and a portion of the site. The shoulders of this road were soil covered. A private elementary school was being constructed on the property north of the site and O'Neill Drive. Potentially hazardous material sources and/or releases were not observed along O'Neill Drive or on the property located immediately to the north.
- The property located immediately east of the site was primarily in an undeveloped state. A concrete block wall was in the process of being constructed around this property. Individual residential-size lots and a roadway appeared to have been precise graded within this property. Potentially hazardous material sources and/or releases were not observed within this property.
- The property located south of the site existed as a leveled undeveloped lot covered with soil. Aboveground structures were not observed on any portion of this property. Potentially hazardous material sources and/or releases were not observed on this property.

- An asphalt-paved roadway, Sienna Parkway, was located along the site's western side. The shoulders of this road were soil covered. An ascending slope was located west of this roadway and the site's central and southern portions. An apparent groundwater production well and associated appurtenances were located west of the site's northern portion. Potentially hazardous material sources and/or releases were not observed along Sienna Parkway or properties located west of the site.

Environmental Database Review

Environmental Data Resources, Inc. (EDR) conducted a search of available environmental records for the site and adjoining areas up to one mile away from the site. The search met the specific requirements of ASTM Standard Practice for Environmental Site Assessments, E-1527-00, including those associated with government databases, search distances, and data currency. EDR's report, dated September 30, 2003, is included as an attachment to this report. Pages 1 through 3 of the executive summary for the EDR report list the federal, state, and local environmental databases searched for this investigation. A description of these databases is provided at the rear of EDR's report.

Maps provided in the EDR report, Pages 2 and 3, shows the location of the subject site and properties within the search distances defined by ASTM. As noted in the report, the site is not listed within any of the environmental databases. In addition, there are no properties within 1 mile of the site listed within the environmental databases searched.

Based on a review of the EDR report, there are no properties within one mile of the site considered as having the potential to impact the soil and/or groundwater underlying the subject site.

Conclusions and Recommendations

As noted above, there are currently no known or suspected hazardous material releases and/or sources at the site. Potential releases of petroleum hydrocarbons and/or chemicals were not encountered during a reconnaissance of the site, or during previous reviews of background materials for the site. The potential for soil and/or groundwater contamination beneath the site is considered very low.

Based on the findings of this assessment, further environmental investigations into the release of hazardous materials at the subject site are not considered warranted.

Respectfully submitted,

NMG GEOTECHNICAL, INC.

LIMITATIONS

This Phase I environmental site assessment, conducted in September 2003, is based on information made available during the course of this assessment. The information obtained during this assessment, at a minimum, complies with criteria specified in Standard Practice for Environmental Site Assessments: Phase I, ASTM Standard E 1527-00. This standard, as well as this assessment, does not include the following:

- Subsurface or geotechnical evaluations of the site;
- Soil, water, or material sampling and analysis; or
- Sampling or testing for asbestos, lead, or radon.

The findings presented in this report are carefully documented statements of fact, based on materials *reasonably ascertained* during the course of this assessment. They represent legally defensible distillate of the due diligence effort conducted by NMG on behalf of the client. We do not disclaim or disavow our Findings.

Based on the findings of this investigation, NMG states its conclusions. Generally, these statements are our opinions. Any applicable facts that materially affect our opinion are so stated. Additional services are recommended when doing so is in the best interest of client.

NMG represents the report, addenda, and amendments thereof as results of an environmental due diligence evaluation of the property.

The report is the property of the client for whom it was prepared. Its distribution to others is at client's discretion. To the best of our professional ability, NMG warrants that users of the Report may rely upon it as an accurate reflection of the environmental conditions of the property at the time it was evaluated.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc. (EDR). The report meets the government records search requirements of ASTM Standard Practice for Environmental Site Assessments, E 1527-00. Search distances are per ASTM standard or custom distances requested by the user.

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Source: EPA

Telephone: 703-413-0223

As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

US BROWNFIELDS: A Listing of Brownfields Sites

Source: Environmental Protection Agency

Telephone: 202-566-2777

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become BCRLF cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data

Source: PennWell Corporation

Telephone: (800) 823-6277

This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers for Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.
